An Introduction to the Thesis	1
Natural Computing: An Historical Perspective	1
Molecular and Cellular Computing	1
Content of the Thesis	4
1 Preliminaries	9
1.1 Formal Languages Preliminaries	9
1.1.1 Alphabets, Strings, Languages, and Multisets	9
1.1.2 Chomsky Grammars	12
1.1.3 Regulated Rewriting	15
1.1.4 Parallel Rewriting	18
1.1.5 Automata Theory	20
1.2 Cells and Membranes	26
1.3 Membrane Computing Preliminaries	28
1.3.1 Membrane Systems with Symbol-Objects	29
1.3.2 Membrane Systems with Symport/Antiport Rules	33
1.4 Final Remarks	35
2 A First Suggestion from Biology: the Evolution-Communication Model	37
2.1 Evolution-Communication P Systems	38
2.1.1 Computational Power	39
2.2 P Systems with Symport/Antiport of Rules	44
2.2.1 Computing with CR P Systems: Two Examples	46
2.2.2 Using Non-Cooperative Evolution Rules	47
2.2.3 Using One Catalyst: Universality	53
2.3 Final Remarks	56
3 Using EC P Systems to Model Biological Processes	59
3.1 The Software	60
3.1.1 How the Software Works: A Simple Example	60
3.2 A First Probabilistic Simulation: Is Life Unpredictable?	63
3.3 Modeling Some Biological Processes	64

3.3.1	Modeling a First Biological Process: The Respiration in Bacteria	65
3.3.2	Pumps in Escherichia coli	71
3.3.3	Respiration-Photosynthesis Interaction in Cyanobac- teria	73
3.3.4	Pumps in Cyanobacteria	77
3.4	Final Remarks	78
4	Proton Pumping and Time-Free P Systems	81
4.1	Proton Pumping P Systems	82
4.1.1	An Universality Result	83
4.2	Time-Free P Systems	88
4.2.1	Preliminary Results	91
4.2.2	Using Non-Cooperative Evolution and Signaling Rules	94
4.2.3	Using (Bi-stable) Catalysts and Signal-Promoters . . .	95
4.2.4	Synchronization by Transport Mechanisms: The Case of Symport/Antiport Rules	101
4.3	Final Remarks	104
5	Evolution and Observation	107
5.1	P/O Systems	111
5.1.1	Considering Non-Halting Computations	112
5.1.2	Considering Halting Computations	115
5.2	Evolution and Observation: A Non-Standard Way to Look at Formal Languages	120
5.2.1	Automata with Singular Output	120
5.2.2	G/O Systems	121
5.2.3	Always Writing G/O Systems	122
5.2.4	Initial G/O Systems	124
5.2.5	Free G/O Systems	126
5.3	Splicing Recognizers	130
5.3.1	A Short Example	132
5.3.2	Preliminary Results	134
5.3.3	Universality	136
5.4	Final Remarks	140
6	Concluding Remarks and Open Problems	143
6.1	Evolution-Communication Models	144
6.2	Modeling Biological Processes	146
6.3	Time-Free P Systems	149
6.4	Evolution and Observation	150
	Bibliography	155
