

Contents

1 Prolegomena	1
1.1 Introduction.....	1
1.2 Membrane computing.....	3
1.2.1 The structures and functions of membranes	3
1.2.2 The foundation of membrane computing	4
1.2.3 The development of membrane computing	4
1.2.4 The classification of membrane computing	5
1.2.5 The realization and application of membrane computing	11
1.2.6 The trend in development of membrane computing.....	12
1.3 Evolutionary Computation.....	13
1.3.1 The characteristics of evolutionary computation	13
1.3.2 The branches of evolutionary computation	14
1.3.3 The actuality and trend of evolutionary computation.....	15
1.4 Similarities and differences between membrane computing and evolutionary computation.....	15
1.4.1 The characteristics of evolutionary computation	15
1.4.2 The similarities between membrane computing and evolutionary computation	16
1.4.3 The differences between membrane computing and evolutionary computation	18
1.4.4 Pondering upon the bionic computation.....	18
1.5 Optimization methods.....	19
1.5.1 Significance of optimization	19
1.5.2 The complexity of optimization problems	20
1.5.3 The classification of optimization methods.....	20
1.6 Membrane computing optimization methods.....	22
1.7 The investigation of this paper.....	22
2 The standard P systems and membrane computing optimization methods	25
2.1 Introduction.....	25
2.2 The standard P systems.....	25
2.2.1 The idea of Păun's membrane computing	25
2.2.2 The formalization methods and a P system	27
2.3 The idea of membrane computing optimization methods.....	30
2.3.1 The formalization of membrane computing optimization methods	30
2.3.2 Configuration	31
2.3.3 Structure	31
2.3.4 Objects	32
2.3.5 Rules.....	33
2.3.6 Input and Output	35
2.4 Cell-like membrane computing optimization methods.....	35

2.4.1	The algorithm	35
2.4.2	The test of algorithm	41
2.4.3	The analysis and improvement of algorithm	53
2.5	The differences between membrane computing optimization methods and standard P systems	56
2.5.1	The characteristics of standard P systems	56
2.5.2	The characteristics of membrane computing methods	56
2.5.3	The differences between membrane computing optimization methods and standard P systems	56
2.6	Brief summary	57
3	DNA membrane computing optimization methods	59
3.1	Introduction	59
3.2	The foundation of system	59
3.2.1	Configuration	60
3.2.2	Systemic structure	60
3.2.3	Objects	60
3.2.4	Rules	61
3.2.5	The result	63
3.3	Experiments	63
3.3.1	The comparison of algorithms	63
3.3.2	Reliability and improvement	66
3.3.3	Analysis	68
3.4	Controller design for marine diesel engine	68
3.4.1	The model of marine diesel engine	68
3.4.2	The performance comparison and analysis of controllers	71
3.5	Brief summary	72
4	Membrane computing optimization based on stretch and shrinkage rules	75
4.1	Introduction	75
4.2	The foundation of algorithm	75
4.3	Stretch and shrinkage rules	76
4.3.1	The shrinkage of search area	76
4.3.2	The stretch of search area	77
4.4	The performance comparison of algorithms	79
4.5	Brief summary	82
5	Multi-objective optimization methods	83
5.1	Introduction	83
5.2	Multi-objective optimization problems	83
5.3	PMOA algorithms	84
5.3.1	Systemic structure	84
5.3.2	The function of subsystems	85
5.3.3	The evolution of subpopulations	86

5.3.4 The elitism strategy in skin	87
5.4 The experiment.....	88
5.4.1 Test functions	88
5.5 The experiment and analysis.....	89
5.5.1 Experiment result	89
5.5.2 Algorithm analysis	94
5.6 Brief summary.....	95
6 The multi-objective optimization of simulated moving bed	97
6.1 Introduction.....	97
6.2 Simulated moving bed.....	97
6.2.1 The models of simulated moving bed	98
6.2.2 Simulation resulting	100
6.3 The objectives of simulated moving bed.....	101
6.4 TPS algorithm.....	103
6.4.1 The structure.....	104
6.4.2 The flowchart of algorithm	105
6.5 Experiments.....	105
6.5.1 The design of experiments	105
6.6 Result and analysis.....	105
6.7 Brief summary.....	108
7 Multi-objective optimization design of controller.....	109
7.1 Introduction.....	109
7.2 The objectives and design process.....	110
7.3 An example.....	113
7.4 Result and analysis.....	114
7.4.1 Optimal controller set.....	114
7.4.2 The relationship of criteria in frequency domain	114
7.4.3 The decision space	115
7.4.4 The criteria in time domain	117
7.5 Brief summary.....	119
8 Dynamic Multi-objective optimization.....	121
8.1 Introduction.....	121
8.2 The definition of dynamic multi-objective optimization.....	122
8.2.1 The test functions	124
8.3 The controller design for time varying unstable plant.....	130
8.4 The membrane control strategy.....	136
8.4.1 The defect of current work	137
8.4.2 The idea of membrane control strategy	138
8.4.3 The stability analysis.....	138
8.4.4 Dynamic multi-objective membrane computing optimization method.....	140
8.4.5 The superimposition of static controllers	143

8.4.6 The dynamic selection of controllers	146
8.4.7 Real time	148
8.4.8 Reliability.....	151
8.5 Brief summary.....	154
9 Summary and expectation.....	157
9.1 Summary.....	157
9.2 Expectation.....	159
References.....	161
Publication during doctoral term	175
Project during doctoral term	176
Resume of author	177
Resume of supervisor.....	178
