

Contents

An Introduction to the Thesis	11
1 Theoretical Computer Science: A Historical Perspective	15
1.1 Natural Computing: Cellular and Molecular Computing . . .	16
1.2 Cells, Membranes and Molecules: An Informal Understanding	19
2 Preliminaries	25
2.1 Formal Language Preliminaries	25
2.1.1 Alphabets, Strings, Languages, and Multisets	25
2.1.2 Chomsky Grammars	28
2.1.3 Regulated Rewriting	30
2.1.4 Parallel Rewriting	32
2.1.5 The Splicing Operation	33
2.1.6 Automata Theory	34
2.2 Computational Complexity	38
2.3 Membrane Computing Preliminaries	39
2.3.1 Membrane Systems with Symbol-Objects	39
2.3.2 Computational Complexity in P Systems	43
2.3.3 P Systems with Active Membranes	47
2.3.4 Spiking Neural P Systems	49
3 Using Cell Interaction Operations in P Systems	51
3.1 Polarizationless P Systems	52
3.1.1 Formalization of Membrane Merging, Separation, and Release Operations	54
3.1.2 Two Universality Results	55
3.1.3 Two Efficiency Results	59
3.2 Minimal Parallelism	67
3.2.1 Computational Completeness Results	68
3.2.2 Computational Complexity Results	74
3.3 Replicative-Distribution Rules	86
3.3.1 Computational Universality	86
3.3.2 Computational Efficiency	88

4	Membrane Systems with Neural-Like Operations	93
4.1	Exciting/Inhibiting (On/Off) Operation	94
4.1.1	Using One Catalyst: Two Universality Results	96
4.1.2	Using Non-Cooperative Rules and One Switch	100
4.2	Inhibiting/De-inhibiting (AID) P Systems with Active Membranes	100
4.2.1	Simulating Logical Gates	103
4.2.2	Simulating Boolean Circuits	106
4.2.3	Accepting and Generative Universality Results	109
4.2.4	An Efficiency Result for AID P systems	110
5	Spiking Neural P Systems	113
5.1	Axon P Systems	113
5.2	Examples	115
5.3	The Generative Power of SN P Systems	116
5.3.1	A Characterization of FIN	116
5.3.2	Relationships with REG	117
5.3.3	Beyond REG	118
5.4	Axon P Systems with States	121
5.5	Spiking Neural P Systems with Self-Activation	125
5.5.1	A solution to SAT	130
6	Computability of Gene Assembly in Ciliates	135
6.1	The Gene Assembly Operations	136
6.2	The Contextual Intramolecular Operations	139
6.2.1	Computational Universality	141
6.2.2	Computational Efficiency	145
	Bibliography	157
