Foreword	i
Invited talks:	
E. Csuhaj-Varjú: P automata: Models, Results, and Research Topics	1
R. Freund: Asynchronous P systems	12
V. Manca: On the Dynamics of P systems	29
M. Margenstern (with L. Colson, N. Jonoska, Gh. Păun): About P systems and <i>lambda</i> -calculus	44
M. Pérez-Jiménez: Complexity classes in membrane computing	63
G. Rozenberg: Selectivity in molecular computing	64
K. Ueda (with N. Kato): LMNtal: a language model with links and membranes	65
Regular papers:	
A. Alhazov, R. Freund: On the efficiency of P systems with active membranes and two polarizations	81
A. Alhazov, S. Sburlan: (Ultimately confluent) Parallel multiset-rewriting systems with permitting contexts	95
O. Andrei, G. Ciobanu, D. Lucanu: Rewriting P systems in Maude	104
I.I. Ardelean, D. Besozzi, C. Manara: Aerobic respiration is a bio-logic circuit containing molecular logic gates	119

F. Arroyo, C. Luengo, J. Castellanos, L.F. Mingo: Representing multisets and evolution rules in membrane processors	126
G. Bel Enguix: Analyzing P systems structure: Working, predictions, and some linguistic suggestions	138
F. Bernardini, M. Gheorghe: Computing at population level in P systems	151
D. Besozzi, G. Ciobanu: A P system description of the sodium-potassium pump	154
M. Cavaliere: Towards asynchronous P systems	161
M. Cavaliere, M. Ionescu, T.-O. Ishdorj: Inhibiting/de-inhibiting rules in P systems	174
R. Ceterchi, M.J. Pérez-Jiménez: Simulating parallel architectures with P systems	184
L. Cienciala: P automata with priorities working in sequential and maximally parallel mode	186
A. Cordon-Franco, M.A. Gutiérrez-Naranjo, M.J. Pérez-Jiménez, A. Riscos-Núñez: Exploring computation trees associated with P systems	196
A. Cordon-Franco, F. Sancho-Caparrini: Non-discrete P systems	205
E. Csuhaj-Varjú, G. Vaszil: Reducing the size of extended gemmating P systems	208
R. Freund, M. Oswald, A. Păun: P systems generating trees	221
C. Fu, Z. Qi, J. You: Encoding P systems in non-interleaving π -calculus	233
M.A. Gutiérrez-Naranjo, M.J. Pérez-Jiménez, A. Riscos-Núñez: On descriptive complexity of P systems	245
S.N. Krishna: Universality with RBC-like objects	256
A. Leporati, C. Zandron, G. Mauri: Conservative computations in energy-based P systems	268

M. Margenstern, V. Rogozhin, Y. Rogozhin, S. Verlan: About P systems with minimal symport/antiport rules and four membranes	283
O. Michel, F. Jacquemard: Analysis of the Needham-Schroeder public-key protocol with MGS	295
A. Obtułowicz: General multi-fuzzy sets and fuzzy membrane systems	316
M.J. Pérez-Jiménez, F.J. Romero-Campero: Trading polarizations for bi-stable catalysts in P systems with active membranes	327
V.J. Prakash, K. Krithivasan: Simulating boolean circuits with tissue P systems	343
A. Profir, E. Boian, N. Barbacari, E. Guțuleac, C. Zelinschi: Modelling molecular genetic triggers by means of P transducers	360
Z. Qi, C. Fu, D. Shi, J. You: Specification and execution of P systems with symport/antiport rules using rewriting logic	363
D. Sburlan: Clock-free P systems	372
J.M. Sempere: Covering reductions and degrees in P systems	384
I. Stamatopoulou, M. Gheorghe, P. Kefalas: Modelling of dynamic configuration of biology-inspired multi-agent systems with communicating X-machines and population P systems	392
A. Syropoulos: On P systems and distributed computing	405
A. Syropoulos, S. Doumanis, K.T. Sotiriades: Computing recursive functions with P systems	414
G. Vaszil: On the size of P systems with minimal symport/antiport	422
J. Wiedermann: Coupling computational and non-computational processes: minimal artificial life	432
